

Storage & Packaging Instructions for the Derbywizard Freedom Aluminum Track

All the components for this 4 lane 32' Freedom Aluminum Track will neatly fit into a storage case that is only 6" tall x 15" wide x 96" long. You can easily build this case yourself by simply following our step-by-step plans.

The two legs that elevate the first section stay attached to the track and fold down flush for storage.

The track sections are lowered into (and removed from) the case, upside down, with the help of thin straps.
Note how we stapled one end to the lid of the case.

The track shims (whether taped in place or not) separate the track sections within the case.
No other padding or protection is needed.

After all the sections are loaded you still have 2" to store the remaining accessories. We machined this piece of 2" polystyrene foam insulation to neatly accept and protect the components.
